

Parse the reaction equation from the image and output the **type** and **bounding box** of each part.

```
"reactions": [
  {
    "reactants": [
      { "type": "Mol", "bbox": [0, 4, 338, 161] },
    ],
    "products": [
      { "type": "Mol", "bbox": [627, 2, 1064, 183] }
    ],
    "conditions": [
      { "type": "Txt", "bbox": [380, 43, 573, 89] },
      { "type": "Txt", "bbox": [417, 106, 524, 149] }
    ]
  },
  ...
]
```

(a)BROS

Parse the reaction from the image and the reaction from the image, and for each component, output its **type** along with either its **ID** or **text** content.

```
"reactions": [
  {
    "reactants": [
      { "type": "Mol", "ID": 1 },
    ],
    "products": [
      { "type": "Mol", "ID": 2 },
    ],
    "conditions": [
      { "type": "Txt", "content": "BrCH2CO2H" },
      { "type": "Txt", "content": "NaOH" },
    ]
  },
  ...
]
```
